

Microglass and PasCal

1

- Microglass has developed for PasCal an active system for temperature restore of the vacuum trays employed in food distribution special setting such as canteen, rescue humanitarian missions, military missions and so on.
- The use of microwaves allows to treat only the meal to be heated, that will be brought to a temperature of 50-60°C in only 30", while the cold dishes remain unchanged.
- The food heat treatment is both absolutely safe, effectiveness and convenient compared with the traditional technologies.
- This restore system is available also in a transportable version (for example for air-transport , for field stations and more)

*Zones heating module.
Fixed solution*
